Questions:

- **Personal Experience:**
  1) What surprised you the most when performing accessibility testing in the selected websites and mobile applications?
  2) How would you describe the experience with the different automated accessibility testing tools used?
  3) Did interacting with assistive technologies during manual testing give a deeper sense of how frustrating poorly designed interfaces can be? Can you describe a moment that stood out?

- **Critical Comparison:**
  4) After doing Individual Accessibility Software Assignments 2 and 3, do you agree with the following statement: "Manual testing is the best type of testing to detect accessibility issues". Why or why not?

- **Conceptual Understanding:**
  5) After the software accessibility lectures covered in class, do you agree with the following statement: "Software accessibility helps everyone, not only people with disabilities". Why or why not?
  6) How important do you think accessibility is compared to the other aspects of software (e.g., performance, scalability, usability, etc.)?
